

Self-Assessment: Your evaluation of your artifact.

Where did you create this artifact?

I created this e-Portfolio as an artifact for the class ICT 700-Introduction to Information & Communication Technologies. This e-Portfolio will serve as a academic tool to showcase my coursework and well as inform of my program competencies and emphasis competencies.

What did you learn?

After creating an e-Portfolio, I learned that this will be a great tool for me to use in the future during my job search. I will be able to showcase the projects I have worked on and how I am applying the knowledge I have learned in my courses to real life opportunities. I also learned that this e-Portfolio will serve as my achievements of what I have learned in my classes and will remind of my goals I would like to accomplish in the MS ICT program.

How did you learn this?

The process I used to create the e-Portfolio was through a website call Jimdo. Jimdo is website that allows users to create website for free. They have templates that already have a basic layout of the website to use. Customizing the background and banner are some features available with Jimdo. This is an excellent source to learn how websites work without understanding HTML coding.

How will you apply this?

I can apply what I learned by continuing to improve my Portfolio. I thought only art majors or art careers have portfolios to showcase their work, but anyone can have a portfolio. This is important to me because I will be able to use this e-Portfolio in the future during interviews. I can also apply the website designing experience to my courses in the future.

What challenges & obstacles did you overcome?

The biggest challenge I had while creating this artifact was I had never created a website on my own before. This website is very easy and friendly to use. It is made for people who don't have web design or HTML/CSS experience to be able to create beautiful websites. Once I learned how to navigate the website, it was easy to upload my artifacts.
