

Self-Assessment: Your evaluation of your artifact.

Where did you create this artifact?

I created this artifact as a research paper for the class ICT 509-Collaborative Computing. This research paper was based on wiki and the opportunities enterprises can create when using collaborative tools such as a wiki.

What did you learn?

After creating this research paper, I learned a great deal about different collaborative tools and systems that organizations and enterprises can use to work together with others. I especially learned a great deal about wiki and how such a simple concept of managing content has changed the way information is shared on the internet. The wiki was a great invention and will continue to change the way information is spread, for example, Wikipedia.

How did you learn this?

The process I used to create the research paper was typical of any research paper. I researched articles, peer reviews, blogs, and white papers on wikis and other collaborative tools. After doing research and collecting data, I was able to gain a better understanding of the collaborative tools and systems that organizations and enterprises today are using. I then compiled this information to write a research paper that provided a recommendation of a useful collaborative tool.

How will you apply this?

I can apply what I learned by continuing to learn about collaborative tools and systems that organizations and enterprises today are using. These collaborative tools are important because sometimes they are such a useful tool within an organization that needs it to function on a daily basis. Collaborative computing is the future of how everyone will be working together and I can continue to learn which tools are best situated for each industry.

What challenges & obstacles did you overcome?

The biggest challenge I had while writing this research paper was that there were many enterprise collaborative tools that I have never used personally. I was unable to write about those tools with firsthand experience. I have used other collaborative tools mentioned in the research paper and was able to write about them effectively such as PowerPoint and wikis.
